## **Abstract:**

Soybean is an important Kansas crop, being grown on 3 million acres. Soybean is used in many products that we use daily, but most people have little knowledge of how soybean grows or how it is produced. The purpose of this web page was to provide information to elementary students and the general public via photographs and narrative descriptions on soybean production from planting to harvest. A field site was located on the Agronomy Farm near Manhattan, KS in May, 2001 to watch and photograph significant stages throughout the growing season. The web site is:  
[www.oznet.ksu.edu/soybeanscene](http://www.oznet.ksu.edu/soybeanscene).
