Abstract:

A series of interactive learning modules for corn diseases has been developed for Certified Crop Advisors (CCAs). The series is composed of 5 modules that are delivered via CD-ROM. The initial core module familiarizes the learner with key concepts of crop diseases and terminology that will be encountered in the series. The other four interactive self-study modules present information on disease identification, pathogen dynamics, and management considerations for all the major diseases of corn in North America. Each module contains a review section and sample test to help prepare the learner for an on-line test to receive continuing education units (CEUs). The modules can be accessed through the Iowa State University Crop Advisor Institute (<http://www.cai.iastate.edu>).
